## **Left Wing Of A Bird**

The left and right wing belong to the same bird and in the middle is the brain. The left and right wing cannot fly by themselves and they do not have control of the direction they fly. It is in the middle that the power is held for the left and right wing cannot talk to each other without the body of the bird in the middle.

Two wings on the same bird has been a good thing in the past when both wings realized that they had to work together in order to get the bird anywhere worthwhile. The problem we have now is that one of the wings believes it has all the answers and is completely against working with its counterpart.

### **right wing, left wing, two wings on the same bird? | Yahoo ...**

Bird ringing or bird banding is the attachment of a small, individually numbered metal or plastic tag to the leg or wing of a wild bird to enable individual identification. This helps in keeping track of the movements of the bird and its life history. It is common to take measurements and examine conditions of feather molt, subcutaneous fat, age indications and sex during capture for ringing.
