retrospectively reviewed 150 consecutive patients who underwent a brow lift by the senior author (TAM). The technique begins with an upper blepharoplasty incision which is used to divide the corrugator under direct vision, followed by a release of the periorbital retaining ligaments. The lateral temporal incision is the access point for dissection above the deep temporal fascia then connecting ...

Local anesthesia simplified, (Book, 1924) [WorldCat.org]

CONCLUSION: Our simplified local anesthesia approach of EXT-DCR is convenient for the patient because it avoids unnecessary nasal packing. It is also safe and effective, as evidenced by the high rate of successful completion of the procedure without conversion to general anesthesia or the need for supplemental local anesthesia.
